

THICK BLEACH PRODUCTION

Chemicals needed

- ⓐ ½ kg of caustic soda
- ⓐ ½ kg of soda ash
- ⓐ 1 kg of chlorine
- ⓐ ¼ kg of soap base
- ⓐ preferred quantity of fragrance
- ⓐ preferred quantity of "parazone color" (optional)

HOW TO PRODUCE THICK PARAZONE

Procedure:

- pour soap base in a bowl.
- add chlorine.
- add bits of water and continue to stir in only one direction.
- add soda ash and stir well in only one direction.
- continue to add more water as you stir gently.
- add caustic soda gently into the mixture and continue to stir well in only one direction.
- add bits of water as you stir gently till everything dissolves.
- use funnel to package into bottles.
- after 72 hrs you will notice that the top is clear.
- strain off the top clear liquid into a different bucket.
- strain well and be careful not to allow some of the sediments to enter.
- now, add fragrance and parazone colour to the mixture.
- pour mixture into a bucket.
- close the bucket with a lid.
- leave for 24hrs-72 hrs.
